MACHINE TRANSPORTER

The Vlemmix Trailers machine transporters are designed to handle heavy-duty tasks every day. All models are hot-dip galvanized, providing durable protection against corrosion. This means the transporters are resistant to wear and tear and prevent rust formation, even with scratches or minor damages. The strong and reliable construction is complemented by a neat finish, with sharp edges, zinc, and metal points carefully treated, and the lighting cables neatly tucked into the chassis.

The machine transporter's loading ramp is equipped with a gas spring, making folding and unfolding effortless and safe. The perforated floor with anti-slip profile ensures easy and safe loading of machinery. With a loading floor height of 34 cm and a ramp height of 130 cm, there is a minimal incline, making it easy to drive machines onto the transporter. If needed, the ramp can be extended for added convenience.

Vlemmix Trailers offers a wide range of machine transporters in various configurations, ensuring a suitable solution for your specific needs.
